

This heatmap displays the distribution of the 'Age' variable across the 50 US states. The x-axis represents the age groups (0 to 22), and the y-axis represents the states. The color scale ranges from dark red (low frequency) to light orange (high frequency). The distribution is highly concentrated in the youngest age groups (0-4), with the highest frequencies (lightest orange) appearing in the first few rows, likely representing states with high birth rates or young populations. The frequency decreases significantly for older age groups, with most cells in the 10-22 range being dark red.
